Outside oncology consultation

Patient ID: SYN-003

Document date: 2024-11-20

Consultation summary

Ms. Doe was seen for a second opinion on metastatic colorectal cancer. Before her microsatellite status was confirmed, she received pembrolizumab 200 mg every 3 weeks for four cycles from June to August 2024 on a basket study, stopped for lack of response. Her tumor was later confirmed microsatellite stable. We reviewed second-line chemotherapy and recommended FOLFIRI, which she began in December 2024. She will continue care with her local oncologist.
