Neurology clinic note

Patient ID: SYN-004

Document date: 2026-02-20

Follow-up after emergency visit

Ms. Roe presented to the emergency department on 2026-02-09 with sudden spinning dizziness on turning her head in bed, lasting under a minute per episode. Neurological examination was normal. The Dix-Hallpike test was positive on the right.

MRI brain on 2026-02-10: no acute infarct, no hemorrhage, no intracranial metastases.

Assessment: benign paroxysmal positional vertigo. Treated with a canalith repositioning maneuver; symptoms resolved. Plan: vestibular exercises; return if symptoms recur.
