Pulmonology consultation

Patient ID: SYN-004

Document date: 2025-05-06

Consultation summary

Ms. Roe is seen in follow-up for a respiratory illness. In March 2025 she developed cough and fever while receiving chemotherapy for colorectal cancer. Chest X-ray showed right lower lobe consolidation, and she was diagnosed with community-acquired pneumonia. She completed a 7-day course of oral amoxicillin-clavulanate. Repeat chest X-ray on 2025-04-15 showed resolution of the consolidation. She is now asymptomatic. Plan: no further pulmonary follow-up is needed.
