Neurology clinic note

Patient ID: SYN-004

Document date: 2026-02-20

Follow-up after emergency visit

Ms. Roe presented to the emergency department on 2026-02-09 with sudden weakness of the left arm and slurred speech, which resolved completely within 30 minutes. Neurological examination at this visit is normal.

MRI brain on 2026-02-10: no acute infarct, no hemorrhage, no intracranial metastases.

Assessment: transient ischemic attack on 2026-02-09. Started aspirin 81 mg daily and atorvastatin. Plan: carotid ultrasound; return immediately for new symptoms.
